DETAILED ACTION

1. This action is in response to applicant's response filed on June 21, 2004.

Claims 2-6, 9-10 pending in the present application.

REASONS FOR ALLOWANCE

2. The following is an examiner's statement of reasons for allowance::

This invention relates to a circuit to provide a stable indication suitable for use in half-duplex communication in a speakerphone having a line input and a mircrophone input, and to a method for comparing a first signal on the microphone and a second seignal on the line input to determine whether to transmit or receive. Claim 9 identifies the uniquely distinct feature of the method comprising the steps of: (a) comparing the signals to each other and to at least one threshold to produce a binary representation of the comparisons; (b) converting a pluarlity of binary representations into a first count; and (c) comparing the first count to at least one count threshold to indicate whether to transmit or receive. As such, claim 9 requires converting a pluarlity of binary representations into a first count; and comparing the first count to at least one count threshold to indicate whether to transmit or receive . While the closest priro art, Arbel [US 4,879,745], McCaslin et al [US 5,764,753] and Kurokawa et al [US 5,535,433] each teach about whether to transmit or receive, Arbel making analog comparisons and using a control state machine, McCaslin et al using the absolute value of a receive signal in conjuction with a counter, and Kurokawa et al using a logic control circuit; none of them show or suggest to utilize converting a pluarlity of binary representations into a first

count; and comparing the first count to at least one count threshold to indicate whether to transmit or receive. As such, the prior art, either singularly or in combination, fail to anticipate or render the above limitation obvious. Therefore, claim 9 is allowable.

Claims 2-6 and 10 are allowable due to dependence from claim 9.
